

Staged for Success: Stage 3 Public Health & Clinical Data Registry Reporting

What is Public Health & Clinical Data Registry Reporting?

Public Health & Clinical Data Registry Reporting refers to when a provider actively engages with a public health agency (PHA) or clinical data registry (CDR) to submit electronic public health data in a meaningful way using certified EHR technology. To successfully meet the associated Stage 3 objective of the Medicaid Promoting Interoperability Program, eligible professionals (EPs) are required to be in active engagement with 2 qualified registries.

Important Points to Consider

- Active engagement can be demonstrated in the following ways:
 - *Option 1, Registration:* Registration was completed within 60 days after the start of the EHR reporting period **AND** the EP is awaiting an invitation to begin testing and validation.
 - *Option 2, Testing and Validation:* The EP is in the process of testing and validation of the electronic submission of data and maintains active communication with the registry.
 - *Option 3, Production:* The EP has completed testing and validation and is electronically sending data to the registry.
- There are multiple exclusions for each of the public health reporting measures.
- An exclusion does **not** count toward the total of 2 measures unless the EP qualifies for multiple exclusions and there are less than 2 remaining available measures.
- If an EP's EHR vendor is not able to integrate with a chosen registry at this time, the EP can still utilize *Option 1, Registration* within **60 days** of the start of the EHR reporting period.

Measures

Measure 1: Immunization Registry

- The EP is in active engagement with a PHA to submit immunization data **AND** receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).
- In Michigan: Michigan Care Improvement Registry (MCIR)

Measure 2: Syndromic Surveillance

- The EP is in active engagement with a PHA to submit syndromic surveillance data.
- In Michigan: Michigan Syndromic Surveillance System (MSSS)
- **NOTE:** MSSS only accepts data from hospital ERs and urgent care locations

Measure 3: Electronic Case Reporting

- The EP is in active engagement with a PHA to submit case reporting of reportable conditions.
- In Michigan: Michigan Disease Surveillance System (MDSS)
- **NOTE:** MDSS requires EHR to be certified for electronic case reporting, exclusion available if it is not

Measure 4: Public Health Registry

- The EP is in active engagement with a PHA to submit data to public health registries.
- In Michigan: MI Cancer Surveillance Program (MCSP), MI Birth Defects Registry (MBDR), MI Automated Prescription System (MAPS)
- Nationally: CDC National Health Care Survey
- **NOTE:** MI Dental Registry (MiDR) no longer counts under Stage 3 for 2019 as it does not use the required data transmission standards
- **NOTE:** MCSP requires EHR to be certified for Cancer Reporting, exclusion available if it is not

Measure 5: Clinical Data Registry

- The EP is in active engagement to submit data to a CDR.
- Example: PRIME Registry
